

ExcelTemplate.BindColumnData

Overload	Description
<code>BindColumnData(Object(), String, DataBindingProperties)</code>	Sets an array of objects as a data source for a single column in the template.
<code>BindColumnData(System.Collections.IDictionary, String, DataBindingProperties)</code>	Sets a column's data source to an IDictionary . An IDictionary represents a collection of key-and-value pairs.
<code>BindColumnData(System.Collections.IEnumerable, String, DataBindingProperties)</code>	Sets a column's data source to an IEnumerable collection. The IEnumerable interface supports a simple iteration over a collection.
