# Pictures.CreatePicture(String, Anchor)

## Description

Creates a new Picture object from an existing image.

---

**C#**

```
public Picture CreatePicture(System.String pictureFile, Anchor position)
```

---

**vb.net**

```
Public Function CreatePicture(ByVal pictureFile As String, ByVal position As Anchor) As Picture
```

---

## Parameters

### *pictureFile*

The file to create the picture from. This file should be in JPEG, PNG, BMP, or GIF format and accessible in the context ExcelWriter is running in.

### *position*

The position to place the upper-left corner of the new picture.

## Returns

A `Picture` object.
