Workbook.Width

Description

Sets or returns the width of the workbook's window.

C#

```csharp
public int Width{ get; set; }
```

---

vb.net

```vbnet
Public Property Width() As Integer
```

Examples

C#

```csharp
//--- Get the width of the workbook window
        int winWidth = wb.Width;

        //--- Set the width of the workbook window
        wb.Width = 500;
```

---

vb.net

```vbnet
'--- Get the width of the workbook window
        Dim winWidth As Integer = wb.Width

        '--- Set the width of the workbook window
        wb.Width = 500
```
