Worksheet.CopyPaste(String, Area, CopyPasteProperties)

Description

Copies an area of cells from another Worksheet to cells in this worksheet.

C#

public Area CopyPaste(System.String destCell, Area sourceArea, CopyPasteProperties
properties)

vb.net

Public Function CopyPaste(ByVal destCell As String, ByVal sourceArea As Area, ByVal properties As CopyPasteProperties) As Area

Parameters

destCell

A string indicating the upper-left cell of the destination area.

sourceArea

An area from the source workbook from which to copy.

properties

A CopyPasteProperties object that specifies the types of data to copy.

Returns

An Area object representing the set of cells populated with the copied values.

Remarks

The copied data will overwrite the contents of the cells in this worksheet. You may specify the types of data copied (cell value, formulas, comments, formatting, etc.) using the CopyPasteProperties object.

Examples

vb.net

```
'--- Open the workbook and worksheet from which we will copy cells.

Dim sourceWb As Workbook = xla.Open("MyDataSource.xls")

Dim sourceWs As Worksheet = sourceWb(0)

'--- Create the workbook and and get the worksheet
'--- into which we will paste cells.

Dim destWb As Workbook = xla.Create("MyNewWorkbook")

Dim destWs As Worksheet = destWb(0)

'--- Define the area of cells to copy.

Dim srcArea As Area = sourceWs.CreateArea("A1:F20")

'--- Copy cell values, formulas and cell and number formatting.

Dim copyPasteProps As CopyPasteProperties = __ sourceWb.CreateCopyPasteProperties( __ CopyPasteProperties.CopyPasteType.ValueFormulasAndFormatting)

'--- Paste the data onto the destination worksheet.

destWs.CopyPaste("A1", srcArea, copyPasteProps)
```
