Worksheet.CreateArea(String)

Description

Defines a rectangular Area of cells in the worksheet.

```csharp
C#

 public Area CreateArea(System.String areaFormula)
```

```vbnet
vb.net

Public Function CreateArea(ByVal areaFormula As String) As Area
```

Parameters

areaFormula
A formula representing the area, e.g. "A3:B5". The formula must be local to the worksheet and should not contain a sheet reference.

Returns

An `Area` object.

Examples

```csharp
C#

Area a = ws.CreateArea("B7:H24");
```

```vbnet
vb.net

Dim a As Area = ws.CreateArea("B7:H24")
```
