

ChartInterior.Visible

Description

Sets or returns whether the specified chart region is visible.

C#

```
public boolean Visible{ get; set; }
```

vb.net

```
Public Property Visible() As Boolean
```

Remarks

For chart regions that normally have a filled background (such as `Chart.ChartArea`), this will be `true` by default. For chart regions that normally have no background (such as `ChartText` instances like `Chart.ChartTitle`) this will be `false` by default.

Setting `ForegroundColor`, `BackgroundColor` or `Pattern` on a `ChartInterior` object will turn `Visible` to `true` automatically.
