

ChartText

Description

A [ChartText](#) object represents a region in a chart where text is displayed (e.g., a chart title). The [ChartText](#) extends [ChartRegion](#).

C#

```
public class ChartText : ChartRegion
```

vb.net

```
Public Class ChartText  
    Inherits ChartRegion
```

Properties

Name	Description
Formula	Sets or returns the formula to use to calculate the value for the text item. For example, if the formula is " =Sheet1!A1 ", the value in that cell will be the text displayed in the ChartText object. <i>(This has no meaning for SeriesDataLabel on a series or on a data point.)</i>
NumberFormat	Sets or returns the display format of numbers in the ChartText object. <i>(This is not supported for Axis or Chart titles.)</i>
Text	Sets or returns the text displayed in the ChartText object. <i>(This has no meaning for SeriesDataLabel on a series, only for SeriesDataLabel on a data point.)</i>

Methods

Name	Description
ClearRichTextFormatting()	Clears all rich text formatting in the ChartText object. <i>(This has no meaning for SeriesDataLabel on a series, only for SeriesDataLabel on a data point.)</i>
GetCharacters(Int32)	Returns a CharacterRun object representing a range of characters within the text. Use this to set a font on specified characters within the ChartText object. <i>(This has no meaning for SeriesDataLabel on a series, only for SeriesDataLabel on a data point.)</i>
GetCharacters(Int32, Int32)	Returns a CharacterRun object representing a range of characters within the text. Use this to set a font on specified characters within the ChartText object. <i>(This has no meaning for SeriesDataLabel on a series, only for SeriesDataLabel on a data point.)</i>
