

Legend

Description

A [Legend](#) object represents a chart's legend. To return Legend object, use [Chart.Legend](#).

C#

```
public sealed class Legend : ChartRegion
```

vb.net

```
Public NotInheritable Class Legend  
    Inherits ChartRegion
```

Properties

Name	Description
Location	Sets or returns how the legend will be positioned in relation to the chart's plot area.
Vertical	Sets or returns whether the legend will be displayed vertically.
Visible	Sets or returns whether the chart legend will be displayed.

Nested Classes

Name	Description
LegendLocation	The LegendLocation class contains all available legend positions relative to a chart's plot area.
