

FunctionValue.FunctionValue(String)

Description

Creates a new [FunctionValue](#) object setting the `Value` property to the String passed in to the constructor and setting the `Type` property to [FunctionValueType.STRING](#).

C#

```
public FunctionValue(string text)
```

vb.net

```
Public Sub New FunctionValue(text As String)
```

Examples

C#

```
FunctionValue myValue = new FunctionValue("String value");
```

vb.net

```
Dim myValue As New FunctionValue("String value")
```
