

PowerPointTemplate.Save

| Overload | Description |
|--|--|
| <code>Save(System.Web.HttpResponse, String, Bool)</code> | Streams the PowerPointTemplate to the client. This method allows you to specify a default client-side file name, and whether the file should be opened in the browser window or in Microsoft PowerPoint. |
| <code>Save(String)</code> | Saves the PowerPointTemplate to disk. The location is specified by the <code>filename</code> parameter. |
| <code>Save(System.IO.Stream)</code> | Saves the PowerPointTemplate to a stream passed in as the stream parameter. |
| <code>Save(System.Web.HttpResponse)</code> | Streams the PowerPointTemplate to the client. |
