

# PowerPointTemplate.Save(String)

## Description

Saves the PowerPointTemplate to disk. The location is specified by the `filename` parameter.

**C#**

```
public void Save(System.String filename)
```

**vb.net**

```
Public Sub ApplyStyle(ByVal filename As String)
```

## Parameters

### *filename*

Specifies a complete path and file name for the generated file. PowerPointWriter will save the file to this location. If a file with the same name exists, it will be overwritten by the new PowerPoint file.

## Exceptions

### *ArgumentException*

`Save` will throw this exception if `null` or the empty string (C#) is passed to the method.

### *InvalidOperationException*

`Save` will throw this exception if it does not have a PowerPoint document handle (`Save` cannot be called before `Open`).

## Remarks

You can call [Save](#) more than once for a single instance of [PowerPointTemplate](#). This allows you to save more than one copy of a generated files, and/or both save the file on the server and stream it to the client.

## Examples

**C#**

```
//--- Save a .pptx file  
ppTemplate.Save(@"C:\Reports\Presentation.pptx");
```

**vb.net**

```
//--- Save a .pptx file  
ppTemplate.Save("C:\Reports\Presentation.pptx")
```
