PowerPointApplication API

- Alignment — Enum for aligning pictures within a slide.
- DocumentProperties — The DocumentProperties object represents properties of a spreadsheet.
- Picture — A Picture object represents a picture in a slide and allows the position of the picture to be managed.
- Pictures — The Pictures collection represents the set of pictures in a presentation. To return a Pictures collection, use Slide.Pictures.
- PowerPointApplication — PowerPointApplication is the main class for pure code-based presentation generation (for information about template-based presentation generation, see PowerPointTemplate). A single instance of PowerPointApplication can generate multiple workbooks.
- Presentation — A Presentation object represents a PowerPoint presentation. To return a Presentation object: Call PowerPointApplication.Open() to open an existing PowerPoint presentation.
- Slide — The Slide class represents a single PowerPoint Slide.
- Slides — The Slides class represents the set of slides in a PowerPoint presentation. This object is used to manage (add, copy, remove, etc.) the slides in the presentation To return a Slides object, use Presentation.Slides.
