

CopyPasteProperties.CopyPasteType

Description

A [CopyPasteType](#) value specifies the type of data that will be copied.

C#

```
public sealed class CopyPasteType : TypesafeEnum
```

vb.net

```
Public NotInheritable Class CopyPasteType  
    Inherits TypesafeEnum
```

Values

Name	Description
All	Copies all currently supported types, except for row height and column width. Note: The behavior of <code>All</code> may change in the future as additional features are added to the CopyPaste method.
AllPlusRowHeightAndColumnWidth	Copies all currently supported types, including row height and column width. Note: If you call CopyPaste multiple times on the same worksheet, using this setting may have undesired results.
FormulasAndFormatting	Copy formulas and cell and number formatting.
None	Copies nothing. You must then set the behavior of CopyPaste by setting individual properties on the CopyPasteProperties object before calling the CopyPaste method.
ValuesAndFormatting	Copy cell values and cell and number formatting.
ValuesFormulasAndFormatting	Copy cell values, formulas, and cell and number formatting.
ValuesOnly	Copy only cell values.
