

ChartSettings3D.RotationAngle

Description

Sets or returns the rotation angle of a three-dimensional chart in degrees.

C#

```
public int RotationAngle{ get; set; }
```

vb.net

```
Public Property RotationAngle() As Integer
```

Remarks

In Excel 2007 or 2010, this corresponds to the X rotation. Rotation values outside the range [0, 360] will be interpreted modulo 360. For example, setting `RotationAngle` to 400 is equivalent to setting it to 40.

The default rotation angle is 20, except for Pie charts, which use a default of 0.
