

SettingsLineAreaScatter.HighLowLine

Description

Returns a [ChartLine](#) object representing the high-low lines of a line or scatter series.

C#

```
public ChartLine HighLowLine{ get; }
```

vb.net

```
Public ReadOnly Property HighLowLine() As ChartLine
```

Remarks

High-low lines connect the highest value in a group of series with the lowest. By default, high-low lines are colored black, have a Narrow [weight](#) and a Solid [style](#). Note that scatter and area charts do not support high-low lines, so while you can set the high-low line properties, they will not appear in the output of a scatter or area series.
