

ValueAxis.UseLogarithmicScale

Description

Sets or returns whether a logarithmic scale should be used on the axis.

C#

```
public boolean UseLogarithmicScale{ get; set; }
```

vb.net

```
Public Property UseLogarithmicScale() As Boolean
```

Remarks

By default, this property is set to false. If you set this to true, then the resulting axis will represent its range on a logarithmic scale of base 10. If you are using a chart from a file that had the base set to something other than 10, we will preserve this.

This property can affect the properties: [MaxValue](#), [MinValue](#), [MajorIncrement](#), and [MinorIncrement](#). See those classes to see how they are affected by the state of this property.
