

ValueAxis.CategoryCrossingValue

Description

Sets or returns the Y value at which the category axis crosses the value axis.

C#

```
public double CategoryCrossingValue{ get; set; }
```

vb.net

```
Public Property CategoryCrossingValue() As Double
```

Remarks

The category crossing value moves the category axis up and down this value axis. Note that if `CategoryAxisCrossMaxValue` is true, this value is ignored.

This property is 0 by default.

Setting this property to `double.NaN`, `double.PositiveInfinity` or `double.NegativeInfinity` will set the axis to cross as "Automatic". (Unless `CategoryAxisCrossMaxValue` is true, when this property will be ignored as usual.)
