

# Range.SetConditionalFormat(ConditionalFormat)

## Description

This method copies the specified ConditionalFormat object and associates it with this Range. If any ConditionalFormat objects already exist within the Range, they will be removed and replaced by the specified one.

**C#**

```
public void SetConditionalFormat(ConditionalFormat conditionalFormat)
```

**vb.net**

```
Public Sub SetConditionalFormat(ByVal conditionalFormat As ConditionalFormat)
```

## Parameters

*conditionalFormat*

## Examples

**C#**

```
range.SetConditionalFormat(condFmt);
```

**vb.net**

```
range.SetConditionalFormat(condFmt)
```
