Cell.CreateAnchor(Int32, Int32)

Description

Creates an anchor within the specified cell. An anchor represents the position of a floating (non-cell data) object within a spreadsheet.

C#

```csharp
public Anchor CreateAnchor(int percentX, int percentY)
```

vb.net

```vbnet
Public Function CreateAnchor(ByVal percentX As Integer, ByVal percentY As Integer) As Anchor
```

Parameters

percentX

The X offset from the cell's left side as a percentage of the cell's width. This value must be between 0 and 100.

percentY

The Y offset from the top of the cell as a percentage of the cell's height. This value must be between 0 and 100.

Returns

An anchor for this cell.

Examples

C#

```csharp
Anchor anch = cellB7.CreateAnchor(30, 50);
```

vb.net

```vbnet
Dim anch As Anchor = cellB7.CreateAnchor(30, 50)
```
