

# SettingsBarColumn.Overlap

## Description

Sets or returns the overlap between bars or columns for a category.

**C#**

```
public int Overlap{ get; set; }
```

**vb.net**

```
Public Property Overlap() As Integer
```

## Exceptions

### ***ArgumentOutOfRangeException***

This will be thrown if the given value is not between -100 and 100.

## Remarks

The value will must be between -100 and 100. The higher the value, the greater the overlap within the category.  
This is only applicable to 2D charts.
