

ExcelApplication.Create(FileFormat)

Description

Creates a new workbook containing 1 worksheet, in the specified file format. The sheet is blank when the workbook is created, and standard font, style, and format settings applied.

C#

```
public virtual Workbook Create(FileFormat format)
```

vb.net

```
Public Overridable Function Create(ByVal format As FileFormat) As Workbook
```

Parameters

format

The [file format](#) to use for the workbook.

Returns

A [Workbook](#) object representing the created workbook.

Remarks

For more information about the differences between the file formats, see [ExcelApplication.FileFormat](#)

Examples

C#

```
Workbook wb = xla.Create(ExcelApplication.FileFormat.Xlsx);
```

vb.net

```
Dim wb As Workbook = xla.Create(ExcelApplication.FileFormat.Xlsx)
```
