ExcelTemplate.ExcludeMacros

Description

Sets whether ExcelWriter should remove template macros from the generated spreadsheet or include them.

C#

```
public boolean ExcludeMacros{ get; set; }
```

---

vb.net

```
Public Property ExcludeMacros() As Boolean
```

Remarks

If ExcludeMacros is set to `false`, and the template spreadsheet contains macros, ExcelWriter will preserve the macros in the generated spreadsheet. If `ExcludeMacros` is set to `true`, and the template spreadsheet contains macros, ExcelWriter will not include the macros in the generated spreadsheet. `ExcludeMacros` is set to `false` by default.

`ExcludeMacros` is a **Read/Write** property.

Examples

C#

```
        //--- Setting SetExcludeMacros to "true" tells ExcelWriter to
        //--- to remove macros in the template from the generated
        //--- spreadsheet.
        xlt.ExcludeMacros = true;
```

---

vb.net

```
        '--- Setting SetExcludeMacros to "True" tells ExcelWriter to
        '--- to remove macros in the template from the generated
        '--- spreadsheet.
        xlt.ExcludeMacros = True
```
