ExcelTemplate.Version

Description

Returns the exact version of ExcelWriter.

C#

```
public System.String Version{ get; }
```

---

vb.net

```
Public ReadOnly Property Version() As String
```

Remarks

```
        SoftArtisans.ProductName Major.Minor.Patch.Build
        (mmddyyyy-hhmmss-buildMachineId)
```

PlaceHolder	Description
ProductName	A product name like "SoftArtisans.ExcelWriter." Note: the product name may be different depending on what license key is in effect.
Major	Major release number.
Minor	Minor release number.
Patch	Patch or bug fix number.
Build	Build number.
mmddyyyy	Date the build was compiled.
hhmmss	Time the build was compiled.
buildMachineId	Unique computer ID for the computer on which this product was compiled.

Version is a **Read Only** property.

Examples

C#

```csharp
string version = xlt.Version;

//--- Bind the version to the data marker
//--- %%=$ExcelWriterVersion.
xlt.SetCellDataSource(version, "ExcelWriterVersion");
```

vb.net

```vbnet
Dim version As String = xlt.Version

'--- Bind the version to the data marker
'--- %%=$ExcelWriterVersion.
xlt.SetCellDataSource(version, "ExcelWriterVersion")
```
