

Range.ToString()

Description

Returns a string representation of the [Range](#) object.

C#

```
public virtual System.String ToString()
```

vb.net

```
Public Overridable Function ToString() As String
```

Returns

A string representation of the Range object.

Examples

C#

```
string rangeDescription = range.ToString();
```

vb.net

```
Dim rangeDescription As String = range.ToString()
```
