

ParagraphFormatting.SpacingRule

Description

Line spacing types for a paragraph. If the line spacing is not at least the height of the font used on the line then the top of the character string is truncated.

C#

```
<p> public sealed class SpacingRule : TypesafeEnum</p>
```

vb.net

```
<p>Public NotInheritable Class SpacingRule<br />  
    Inherits TypesafeEnum</p>
```

Remarks

The default value for the [ParagraphFormatting.LineSpacing](#) property is `Multiple`

Values

Name	Description
AtLeast	Minimum height of the width between lines in twips. One twip = (1/20 pt).
Exactly	Exact height of the width between lines in twips. One twip = (1/20 pt).
Multiple	Exact height of the width between lines in number of lines. For example, enter 2 for double spacing.
