Workbook.EncryptPassword

Description

Sets or returns the password used to encrypt the spreadsheet. Standard "Office 97/2000 Compatible" encryption is used to encrypt the spreadsheet. This is the default encryption used by Excel 97 and later versions.

C#

```csharp
public System.String EncryptPassword{ get; set; }
```

vb.net

```vbnet
Public Property EncryptPassword() As String
```

Remarks

To further protect your spreadsheet, you can protect the workbook structure using the Workbook.Protect() method or write-protect individual worksheets using the Worksheet.Protect() method.

Examples

C#

```csharp
//--- Get the EncryptPassword value for the workbook
string pwd = wb.EncryptPassword;

//--- Set the EncryptPassword value for the workbook
wb.EncryptPassword = "MyPassword";
```

vb.net

```vbnet
'--- Get the EncryptPassword value for the workbook
Dim pwd As String = wb.EncryptPassword

'--- Set the EncryptPassword value for the workbook
wb.EncryptPassword = "MyPassword"
```
