

# SharePointIntegration.BindRowData(ExcelTemplate, Microsoft.SharePoint.SPView, Microsoft.SharePoint.SPList, String, DataBindingProperties)

Introduced in build 7.1.0.1855

## Description

Sets a SharePoint View as a data source for a single row in a template.

### C#

```
public static void BindRowData(this ExcelTemplate template,
    Microsoft.SharePoint.SPView view, Microsoft.SharePoint.SPList list, String
    dataSourceName, DataBindingProperties properties)
```

### vb.net

```
Public Shared Sub BindRowData(ByVal template as ExcelTemplate, ByVal view As
    Microsoft.SharePoint.SPView, ByVal list As Microsoft.SharePoint.SPList, ByVal
    dataSourceName As String, ByVal properties As DataBindingProperties)
```

## Parameters

### *template*

The current ExcelTemplate object which is calling BindRowData

### *view*

SharePoint View to use as a data source for the template

### *list*

SharePoint List associated with the SharePoint View

### *dataSourceName*

Name of the data source in the template

### *properties*

The [DataBindingProperties](#) object which contains information about how the data should be bound to the template. `properties` Must be specified, but the `DataBindingProperties` need not be set beforehand. To bind data to a template with the default `DataBindingProperties`, pass in `ExcelTemplate.CreateDataBindingProperties()` as the property value. Otherwise, use the `ExcelTemplate.CreateDataBindingProperties()` method to generate a new `DataBindingProperties` object and set the `DataBindingProperties.MaxRows`, `DataBindingProperties.Transpose`, and/or `DataBindingProperties.WorksheetName` properties for the workbook.

## Exceptions

### ***ArgumentNullException***

`BindRowData` will throw this exception if `null` (C#) or `Nothing` (VB.NET) is passed to the method.

### ***ArgumentException***

## **Remarks**

This is an extension method for the `ExcelTemplate` object to be used for binding SharePoint data to spreadsheets from within SharePoint. To use this method, you must add a reference to `SoftArtisans.OfficeWriter.ExcelWriter.SharePointIntegration.dll`
