SettingsBarColumn.Overlap

Description

Sets or returns the overlap between bars or columns for a category.

C#

```
public int Overlap{ get; set; }
```

vb.net

```
Public Property Overlap() As Integer
```

Exceptions

ArgumentOutOfRangeException

This will be thrown if the given value is not between -100 and 100.

Remarks

The value will must be between -100 and 100. The higher the value, the greater the overlap within the category.
This is only applicable to 2D charts.
