

HeaderFooterSection.GetText()

Introduced in build 4.5.1

Description

Returns the text that is contained in this section of the header or footer, including formatting codes

Remarks

For information on the formatting codes used in headers and footers, see [Formatting Headers and Footers](#). If there is no content in this section of the header or footer, returns null.

C#

```
public string GetText()
```

vb.net

```
Public Function GetText() As String
```
