

# Area.ImportData(System.Data.DataTable)

## Description

Imports data from an ADO.NET `DataTable` to the specified `Area`. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

### C#

```
public Area ImportData(System.Data.DataTable data)
```

### vb.net

```
Public Function ImportData(ByVal data As System.Data.DataTable) As Area
```

## Parameters

### `data`

The `DataTable` to import.

## Returns

An `Area` object representing the set of cells populated with the imported values.

## Examples

### C#

```
Area importedArea = a.ImportData(dt);
```

### vb.net

```
Dim importedArea As Area = a.ImportData(dt)
```
