

SharePointIntegration.BindRowData(ExcelTemplate, Microsoft.SharePoint.SPList, String, DataBindingProperties)

Introduced in build 7.1.0.1855

Description

Sets a SharePoint List as a data source for a single row in a template.

C#

```
public static void BindRowData(this ExcelTemplate template,
Microsoft.SharePoint.SPList list, String dataSourceName, DataBindingProperties
properties)
```

vb.net

```
Public Shared Sub BindRowData(ByVal template As ExcelTemplate, ByVal list as
Microsoft.SharePoint.SPList, ByVal dataSourceName As String, ByVal properties As
DataBindingProperties)
```

Parameters

template

The current ExcelTemplate object which is calling BindRowData

list

SharePoint List to use as a data source for the template

dataSourceName

Name of the data source in the template

properties

The [DataBindingProperties](#) object which contains information about how the data should be bound to the template. property Must be specified, but the DataBindingProperties need not be set beforehand. To bind data to a template with the default DataBindingProperties, pass in ExcelTemplate.CreateDataBindingProperties() as the property value. Otherwise, use the ExcelTemplate.CreateDataBindingProperties() method to generate a new DataBindingProperties object and set the [DataBindingProperties.MaxRows](#), [DataBindingProperties.Transpose](#), and/or [DataBindingProperties.WorksheetName](#) properties for the workbook.

Exceptions

ArgumentNullException

BindRowData will throw this exception if null (C#) or Nothing (VB.NET) is passed to the method.

ArgumentException

Remarks

This is an extension method for the `ExcelTemplate` object to be used for binding SharePoint data to spreadsheets from within SharePoint. To use this method, you must add a reference to `SoftArtisans.OfficeWriter.ExcelWriter.SharePointIntegration.dll`
