

Condition.ApplyStyle(Style)

Description

Applies the specified [Style](#) to the [Condition](#)'s current [Style](#).

C#

```
public void ApplyStyle(Style style)
```

vb.net

```
Public Sub ApplyStyle(ByVal style As Style)
```

Parameters

style

The [Style](#) object to apply to the [Condition](#)'s current [Style](#).

Remarks

A [Condition](#)'s [Style](#) is the formatting that will be set on a conditionally formatted cell if the condition is met. When a [Style](#) is **applied** (rather than **set** using the [Style](#) property), only the differences between the new [Style](#) and existing [Style](#) properties will take effect. To completely replace a [Condition](#)'s [Style](#) with a new one, set [Condition.Style](#).

Examples

C#

```
ExcelApplication xla = new ExcelApplication();
Workbook wb = xla.Create();
ConditionalFormat condFmt = wb.CreateConditionalFormat();
Condition cond =
    condFmt.CreateCondition(
        Condition.Comparison.CellValueGreaterThan,
        "=100");
cond.Style.BackgroundColor = Palette.SystemColor.Green;
Style styleBold = wb.CreateStyle();
styleBold.Font.Bold = true;
cond.ApplyStyle(styleBold);
Range rng = wb.Worksheets[0].CreateRange("$B$2:$F$10");
rng.SetConditionalFormat(condFmt);
```

```
Dim xla As New ExcelApplication()  
Dim wb As Workbook = xla.Create()  
Dim condFmt As ConditionalFormat = wb.CreateConditionalFormat()  
Dim cond As Condition = _  
    condFmt.CreateCondition( _  
        Condition.Comparison.CellValueGreaterThan, _  
        "=100")  
cond.Style.BackgroundColor = Palette.SystemColor.Green  
Dim styleBold As Style = wb.CreateStyle()  
styleBold.Font.Bold = True  
cond.ApplyStyle(styleBold)  
Dim rng As Range = wb.Worksheets[0].CreateRange("$B$2:$F$10")  
rng.SetConditionalFormat(condFmt)
```
