Cell.ApplyStyle(Style)

Description

Applies a style to the cell. When a style is applied - rather than set (see Cell.Style) - only the differences between the new style and style properties previously assigned to the cell (through the ExcelWriter API) will take effect. For example, if the cell has a background color and the new style applied does not contain a background color, the cell's color will not be affected. However, if the new style includes a background color, it will replace the existing background color of the cell.

C#

```
public void ApplyStyle(Style style)
```

vb.net

```
Public Sub ApplyStyle(ByVal style As Style)
```

Parameters

style

A Style object representing the style to apply to the cell.

Examples

C#

```
cellA1.ApplyStyle(s);
```

vb.net

```
cellA1.ApplyStyle(s)
```
