

# Element.InsertTextAfter(String, Boolean)

## Description

Creates and returns a [CharacterRun](#) at the end of this Element. The text to be inserted is specified as well as whether this should be a new character run or part of the previous one.

**C#**

```
public virtual CharacterRun InsertTextAfter(System.String text, boolean newRun)
```

**vb.net**

```
Public Overridable Function InsertTextAfter(ByVal text As String, ByVal newRun As Boolean) As CharacterRun
```

## Parameters

***text***

A `String` representing the text to insert.

***newRun***

A `boolean` representing if this should have default formatting and become its own character run (`true`) or if it should assume the formatting of the first character in this Element, becoming a part of that first character run.

## Returns

The `CharacterRun` containing the inserted text.

## Examples

**C#**

```
CharacterRun charRun = e.InsertTextAfter("Here is some text.", true);
```

**vb.net**

```
Dim charRun As CharacterRun = e.InsertTextAfter("Here is some text.", True)
```
