

Series.ScatterValues

Description

Sets or returns the range of cells containing the x-values of a scatter or bubble chart data series.

C#

```
public System.String ScatterValues{ get; set; }
```

vb.net

```
Public Property ScatterValues() As String
```

Remarks

This property will return null for `Series` that do not represent Scatter or Bubble series, and its value (if set) will only have an effect on Scatter or Bubble series. When appropriate, the `ScatterValues` defines the location on the [ScatterValueAxis](#) for the series. The `ScatterValueAxis` is displayed horizontally.
