

Table.InsertColumns(Int32, Int32)

Description

Inserts one or more columns at the specified position in the table.

C#

```
public void InsertColumns(int index, int numColumns)
```

vb.net

```
Public Sub InsertColumns(ByVal index As Integer, ByVal numColumns As Integer)
```

Parameters

index

The 0-based index of the first column to insert.

numColumns

The number of columns to insert.

Examples

C#

```
tbl.InsertColumns(2, 5);
```

vb.net

```
tbl.InsertColumns(2, 5)
```
