SearchMatch.Element

Description

Returns an Element object representing the current text match.

C#

```
public Element Element{ get; }
```

---

vb.net

```
Public ReadOnly Property Element() As Element
```

Examples

C#

```
//--- Search for social security numbers using regular expressions and delete them.
        WordApplication app = new WordApplication();
        Document doc = app.Open(@"C:\somedoc.doc");
        SearchMatch[] matches = doc.Search("\s\d\d\d-?\d\d-?\d\d\d\d\s");
        foreach(SearchMatch match in matches)
        {
            match.Element.Delete();
        }
```

---

vb.net

```
'--- Search for social security numbers using regular expressions and delete them.
        Dim app As New WordApplication()
        Document doc = app.Open("C:\somedoc.doc")
        Dim matches As SearchMatch() = doc.Search("\s\d\d\d-?\d\d-?\d\d\d\d\s")
        For Each match As SearchMatch In matches
            match.Element.Delete()
        Loop
```
