

DocumentProtection

Description

This class is used to get and set document protection settings for a document.

C#

```
<p> public sealed class DocumentProtection</p>
```

vb.net

```
<p>Public NotInheritable Class DocumentProtection</p>
```

Remarks

You cannot create a [DocumentProtection](#) object using the new keyword. You must get an existing DocumentProtection object from a [Document](#).

MS Word equivalent: Tools menu > Protect Document...

The following sample gets the DocumentProtection object of a document so you can start working with these properties.

Examples

C#

```
WordApplication app = new WordApplication();  
Document doc = app.Create();  
DocumentProtection docProtect = doc.DocumentProtection;
```

vb.net

```
Dim app As New WordApplication()  
Dim doc As Document = app.Create()  
Dim docProtect As DocumentProtection = doc.DocumentProtection
```

Properties

Name	Description
AnnotationsLocked	Sets or returns a boo Lean representing whether or not annotations are locked in this document.
AutoFormatOverride	Sets or returns a boo Lean representing whether or not Word will autoformat to override a style lock down in this document.
