

Section.GetFooter(Section.HeaderFooterType)

Description

Returns an [Element](#) object that represents the footer of the specified type for this section. The footer is returned as a editable element. There are 4 types of footers:

C#

```
public Element GetFooter(HeaderFooterType type)
```

vb.net

```
Public Function GetFooter(ByVal type As HeaderFooterType) As Element
```

Parameters

type

A [Section.HeaderFooterType](#) object that represents the type of footer to return.

Returns

An [Element](#) object that represents the footer of the specified type for this section.

Examples

C#

```
Element oElement = oSection.GetFooter(Section.HeaderFooterType.All);
```

vb.net

```
Dim oElement As Element = oSection.GetFooter(Section.HeaderFooterType.All)
```
