

# Range.SetStyle(Style)

## Description

Sets the style for every cell in this range. When a style is set - rather than applied (see [Range.ApplyStyle](#)) - all previously assigned style properties, including font and number formatting, will be overwritten for all cells in the range.

**C#**

```
public void SetStyle(Style style)
```

**vb.net**

```
Public Sub SetStyle(ByVal style As Style)
```

## Parameters

**style**

The Style object to assign to the range.

## Examples

**C#**

```
rng.SetStyle(styl);
```

**vb.net**

```
rng.SetStyle(styl)
```
