

Styles.Item(String)

Description

Returns a [NamedStyle](#) object that represents the named style that has the specified string version of its name.

C#

```
public NamedStyle this[System.String name] { get; }
```

vb.net

```
Public Default ReadOnly Property Item(ByVal name As String) As NamedStyle
```

Parameters

name

An `String` that represents the name of the style's name to retrieve.

Returns

A `NamedStyle` object that represents the named style that has the specified string version of its name or the specified index.

Examples

C#

```
//--- Get Style by name
NamedStyle myStyle = styles["MyStyle"];

//--- Get Style by ID
NamedStyle styleZero = styles[0];
```

vb.net

```
'--- Get Style by name
Dim myStyle As NamedStyle = styles.Item("MyStyle")

'--- Get Style by ID
Dim styleZero As NamedStyle = styles.Item(0)
```
