

PowerPointTemplate.Save(System.IO.Stream)

Description

Saves the PowerPointTemplate to a stream passed in as the stream parameter.

C#

```
public void Save(System.IO.Stream stream)
```

vb.net

```
Public Sub Save(ByRef stream As System.IO.Stream)
```

Parameters

stream

A stream to write the resulting PowerPoint file to.

Exceptions

InvalidOperationException

Save will throw this exception if it does not have a PowerPoint document handle (Save cannot be called before Open).

Remarks

You can call Save more than once for a single instance of [PowerPointTemplate](#). This allows you to save more than one copy of a generated file, and/or both save the file on the server and stream it to the client.

Examples

C#

```
using (PowerPointTemplate ppt = new PowerPointTemplate())
{
    ppt.Open("MyInputFilePath.pptx");

    using (FileStream outputFile = File.OpenWrite("MyOutputFilePath.pptx"))
    {
        ppt.Save(outputFile);
    }
}
```

vb.net

```
Using ppt As New PowerPointTemplate()  
  
    ppt.Open("MyInputFilePath.pptx");  
  
    Using outputFile As File.OpenWrite("MyOutputFilePath.pptx")  
  
        ppt.Save(outputFile);  
  
    End Using  
  
End Using
```
