

# Table.SetRowHeightExact(Int32, Boolean)

## Description

Sets a `boolean` that represents if the row height is "exact" (true) or "at least" (false).

### C#

```
public void SetRowHeightExact(int row, boolean exact)
```

### vb.net

```
Public Sub SetRowHeightExact(ByVal row As Integer, ByVal exact As Boolean)
```

## Parameters

### *row*

An `int` representing the row index to set `RowHeightExact` for.

### *exact*

A `boolean` that represents if the specified row's height should be "exact" (true) or "at least" (false).

## Remarks

MS Word equivalent: Table menu > Table properties... > Row tab > Size section > Row #: > Row height is:

**Note:** To set this property, you must first set the `RowHeight` property.

## Examples

### C#

```
//--- Set RowHeightExact for the 3rd row to exact  
oTable.SetRowHeightExact(2, true);
```

**vb.net**

```
'--- Set RowHeightExact for the 3rd row to exact  
oTable.SetRowHeightExact(2, True)
```
