

# List.GetLevel(Int32)

## Description

Returns a [ListLevel](#) object representing a particular level for this list. The levels start at 0 and end at 8 (9 levels total).

**C#**

```
public ListLevel GetLevel(int level)
```

**vb.net**

```
Public Function GetLevel(ByVal level As Integer) As ListLevel
```

## Parameters

***level***

An `int` representing the level to get the list level at.

## Returns

A `ListLevel` object representing a particular level for this list.

## Examples

**C#**

```
ListLevel level = lst.GetLevel(0);
```

**vb.net**

```
Dim level As ListLevel = lst.GetLevel(0)
```
