

TableCell.ApplyFont(Font)

Description

Applies [Font](#) properties to all text in this TableCell. The font properties will not be applied to text inside nested tables.

C#

```
public void ApplyFont(Font font)
```

vb.net

```
Public Sub ApplyFont(ByVal font As Font)
```

Parameters

font

A [Font](#) representing the properties that should be applied to text in this TableCell.

Examples

C#

```
tblCell1.ApplyFont(tblFont);
```

vb.net

```
tblCell1.ApplyFont(tblFont)
```
