

# Element.Children

## Description

Returns a collection of [Element](#) objects that represents all the direct children of the current element.

### C#

```
public Element[] Children{ get; }
```

### vb.net

```
Public ReadOnly Property Children() As Element()
```

## Examples

### C#

```
Element[] eArray = e.Children;
```

### vb.net

```
Dim eArray As Element() = e.Children
```
