PivotTableField.IsValuesLabel

Introduced in build 8.4

Description

Returns whether or not the field is a auto generated Values Label. This is only applicable for row labels and column labels.

C#

```
public bool IsValuesLabel{ get; }
```

---

vb.net

```
Public Property IsValuesLabel() As bool
```

Remarks

Values labesl are automatically generated by Excel or ExcelWriter when there are two or more data fields in the PivotTable. They are effectively read-only and the values that are returned when reading certain properties are either `null` or a predetermined default value. Trying to set properties on a values labels will result in an exception.
