

Palette.GetColor(System.Drawing.Color)

Description

Returns a [Color](#) representing the specified color, and throws an exception if the file does not support the specified color.

C#

```
public Color GetColor(System.Drawing.Color color)
```

vb.net

```
Public Function GetColor(ByVal color As System.Drawing.Color) As Color
```

Parameters

color

The desired color.

Returns

A [Color](#) object in the palette that matches the specified color.

Remarks

For .xls files, an exception will be thrown if the color is not in the palette. For .xlsx files, a [Color](#) will always be returned.

Examples

C#

```
Color clr = pal.GetColor(System.Drawing.Color.Red);
```

vb.net

```
Dim clr As Color = pal.GetColor(System.Drawing.Color.Red)
```
