Worksheet.FreezePanes

Description

Freezes panes in a worksheet or returns the cell at which the panes are split. Set the property to a Cell object. The cell specified in `Worksheet.FreezePanes` is the first unfrozen cell; freeze panes will be applied to all rows above the cell and all columns to the left of the cell.

C#

```
public Cell FreezePanes{ get; set; }
```

---

vb.net

```
Public Property FreezePanes() As Cell
```

Remarks

Freeze panes can only be applied to the first few rows or first few columns of a worksheet. This is a limitation of Excel and not ExcelWriter.

Examples

C#

```
        //--- Get FreezePanes
        Cell freezeCell = ws.FreezePanes;

        //--- Set FreezePanes for rows 1-5 and columns A, B
        ws.FreezePanes = ws.Cells["C5"];
```

---

vb.net

```
        '--- Get FreezePanes
        Dim freezeCell As Cell = ws.FreezePanes

        '--- Set FreezePanes for rows 1-5 and columns A, B
        ws.FreezePanes = ws.Cells("C5");
```
