

Worksheet.ImportData

Overload	Description
<code>ImportData(Object(), Cell)</code>	Imports data from a two-dimensional array of objects to cells in the worksheet.
<code>ImportData(Object(), String(), Cell, DataImportProperties)</code>	Imports data from a two-dimensional array of objects to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(Object(), Cell)</code>	Imports data from a rectangular array of objects to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(Object(), String(), Cell, DataImportProperties)</code>	Imports data from a rectangular array of objects to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.IDataReader, Cell)</code>	Imports data from an <code>IDataReader</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.IDataReader, Cell, DataImportProperties)</code>	Imports data from an <code>IDataReader</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.DataTable, Cell)</code>	Imports data from an ADO.NET <code>DataTable</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.DataTable, Cell, DataImportProperties)</code>	Imports data from an ADO.NET <code>DataTable</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.DataView, Cell)</code>	Imports data from an ADO.NET <code>DataView</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(System.Data.DataView, Cell, DataImportProperties)</code>	Imports data from an ADO.NET <code>DataView</code> to cells in the worksheet. The new data will <u>overwrite</u> values and formulas in the target worksheet cells, but existing formatting will be preserved.

SharePoint Integration Extension Methods

Overload	Description
<code>ImportData(Cell, Microsoft.SharePoint.SPList, DataImportProperties)</code>	Imports data from a SharePoint List to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(Cell, Microsoft.SharePoint.SPList)</code>	Imports data from a SharePoint List to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(Cell, Microsoft.SharePoint.SPView, Microsoft.SharePoint.SPList, DataImportProperties)</code>	Imports data from a SharePoint View to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.
<code>ImportData(Cell, Microsoft.SharePoint.SPView, Microsoft.SharePoint.SPList)</code>	Imports data from a SharePoint View to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.
